# Mission Control

From the Mission Control tab you can send you fleets on missions.

1. Choose the fleet that you want to send on a mission;
2. Select the destination, by either selecting one of your favourite destinations or entering the coordinates manually;
3. Select the mission that you want to perform;
4. Click "Go on Mission", this will open a popup;
5. Configure the velocity of the fleet;
6. Setup the fuel that your fleet will require to travel until its destination;
7. If you're doing a transport mission, you can also select the cargo that you'll be transporting;

## ExtractResources 3WHe - TODO, Pluto

**Distance to destination:** 637.62326 units

**Max velocity:** 0.29661 units / second
**Velocity:** 0.16456 units / second

**Select fuel reserves**

| Fuel | Quantity | | Recommended |
|------|----------|---|-------------|
| Hydrogen | | 0 | 15.02 |
| Xenon | | 0 | 21.82 |

Remember that the fastest your fleet travels, the more fuel it will require, yet, when travelling through space, keep in mind that planets position is dynamic. Each planet has a velocity too and you need to take this into consideration when selecting the velocity of your fleet.

# Radar

From the radar you can find nearby settlements, planets and fleets that are on their way to missions.
