Types of Spacecrafts

- Scouts
- Fighters
- Bombers
- Corvettes
- Frigates
- Destroyers
- Cruisers

Scouts

Scouts are small and fast ships primarily used for exploration and reconnaissance. They may have limited armament and are not built for direct combat.

Fighters

Fighters are small, agile ships designed for combat. They excel in dogfights and often operate in squads.

Bombers

Bombers are like fighters but equipped with heavy explosives meant for bombing runs against capital ships or planetary installations.

Corvettes

Corvettes are larger than fighters but still nimble, corvettes serve a versatile role in space combat, often acting as escorts or patrol ships.

Frigates

Frigates are medium-sized ships that can act independently or in fleets, armed with an array of weapons and often serving multiple roles.

Destroyers

Destroyers are heavier than frigates and designed to engage multiple enemies with its vast weaponry. They often act as fleet protectors against smaller ships.

Cruisers

Cruisers are large capital ships with significant firepower. They serve as the backbone of a fleet.
